Dear Hiring Team,

I am excited to apply for the opportunity to join your team. I bring a strong analytical background, hands-on experience with real data and real deadlines, and a habit of taking ownership of a problem from start to finish. I believe these strengths would let me contribute quickly and grow with your organization.

Through internships at Unified Mentor and Savvy Merit, I have worked with large and messy datasets, validated and cleaned them, automated repetitive work, and turned the results into clear reports and dashboards that others could act on. That work taught me to be careful with accuracy, to communicate findings simply, and to keep improving the way a process runs.

I also learn by building. My independent projects include a multi-agent AI research assistant, a market-analysis platform with live data pipelines, and a machine learning platform that reached a ROC-AUC of 0.85 and explained its predictions to non-technical users. Each one required me to learn new tools on my own, make design decisions, and deliver something that works.

I am detail-oriented, dependable under time pressure, and comfortable working both independently and with others. I hold a Bachelor of Computer Applications from Symbiosis International University and the IBM Data Analyst Professional Certificate. I would welcome the chance to discuss how I can add value to your team.

Thank you for your time and consideration.

Sincerely,
Sai Sanjay
