Sai Sanjay

Data Analyst — Financial Markets & Business Intelligence
Pune, India — saisanjay138@gmail.com — +91-9953945158 — linkedin.com/in/sai-s-198a14276 — github.com/SAISANJAY-PARTH

Professional Summary

Data Analyst focused on financial markets, combining SQL, Python, and BI tools to build technical-analysis platforms, market-data pipelines, and KPI reporting frameworks. Built a multi-agent AI research assistant and a 12-indicator market terminal from the ground up, alongside applied ML work in churn prediction and risk segmentation. Comfortable owning a data problem end-to-end: ingestion, analysis, modeling, and visualization.

Technical Skills

- **SQL:** PostgreSQL, Joins, Aggregations, CTEs, Query Optimization
- **Python for Analytics:** Pandas, NumPy, Data Cleaning & Transformation, Scikit-learn
- **BI & Visualization:** Power BI (DAX, Power Query), Tableau, Dashboard Development, KPI Tracking, Exploratory Data Analysis (EDA)
- **Financial & Market Analytics:** Technical Indicators (RSI, MACD, Bollinger Bands, ADX, ATR, Supertrend), Market Data APIs (Upstox, Yahoo Finance), Risk & Volatility Analysis
- **Statistics & Machine Learning:** PyTorch, Classification, Regression, Model Evaluation (ROC-AUC), SHAP Explainability
- **Backend & Deployment:** FastAPI, Flask, REST APIs (Postman), Docker, AWS, Supabase
- **Infrastructure (secondary):** Git/GitHub, Multi-Agent AI Systems

Professional Experience

Data Analyst Intern — Unified Mentor Mar 2026 – May 2026

- Built **Python + SQL** analytics workflows for structured data processing, KPI reporting, and business decision support.
- Performed data cleaning, transformation, and validation using **Pandas, NumPy, and PostgreSQL**, improving data consistency and reducing manual reporting effort.
- Developed **Power BI and Tableau** dashboards using **DAX and Power Query** for data modeling, KPI monitoring, and executive reporting.
- Automated recurring data preparation and ETL tasks, improving reporting turnaround time.

Research Analyst Intern — Savvy Merit Jul 2025 – Sep 2025

- Conducted structured data research and trend analysis across **30+ datasets**, focusing on equities and market data.
- Automated recurring data-processing steps in Python, cutting manual analysis time on repetitive tasks.
- Produced structured research reports summarizing sector- and portfolio-level insights for financial datasets.

Projects

- **QuadraAI – AI-Powered Financial Research Assistant** Live Demo May 2026 – Present
  - Built a multi-agent financial platform with **8 specialized agents** (Portfolio Analysis, Technical Analysis, Fundamental Analysis, Risk Management, Goal Planning, Personal CFO, News & Sentiment, Education), routing each query to a domain-specific agent instead of one generic model.
  - Integrated **Upstox, Yahoo Finance, and News APIs** to ground agent responses in live market data, financial statements, and news sentiment rather than model memory alone.
  - Combined multiple LLM backends (**Groq, DeepSeek, Sarvam**) with a **Flask + Supabase** backend for agent orchestration, session state, and structured output generation.
- **QuadraTerminal – Market Intelligence & Technical Analysis Platform** GitHub Mar 2026 – Apr 2026
  - Built a market-analysis workspace combining market data feeds, interactive charts, and **12 technical indicators** (RSI, MACD, Stochastic K/D, Williams %R, CCI, MFI, CMF, ADX, ATR, Bollinger %B, Supertrend, Parabolic SAR) across timeframes from 15-minute to Monthly.
  - Built data pipelines pulling from **Upstox and Yahoo Finance APIs**, with local caching to reduce redundant API calls during repeated indicator recalculation.
  - Implemented trend, momentum, and volatility analysis tools for research and educational use across watchlisted instruments.
- **FinTech Customer Intelligence & Churn Risk Platform** GitHub Feb 2026 – Apr 2026
  - Built an end-to-end **customer analytics and churn prediction platform** using Python, SQL, and machine learning to identify customer churn risk and support data-driven retention strategies.
  - Developed a **Random Forest** churn model achieving **ROC-AUC: 0.85**, with Logistic Regression as a baseline, and evaluated performance using precision, recall, F1-score, confusion matrix, and threshold analysis.
  - Built a **Low/Medium/High risk scoring framework** based on predicted churn probability, enabling customer prioritization and targeted retention analysis.
  - Performed **EDA, feature engineering, customer segmentation, and statistical analysis** to identify behavioral and financial factors associated with customer churn.
  - Applied **SHAP explainability** for global feature importance and individual customer predictions, making model outputs interpretable for business stakeholders.

Education

Bachelor of Computer Applications — Symbiosis International University 2023 – 2026

Certifications

- IBM Data Analyst Professional Certificate — IBM (Python, SQL, Data Analysis) Credential Link
